

# Lab – Practice What You Learned

## Overview

The following is a simple exercise using basic Linux commands for managing files and folders from the CLI.

Directions:

Using a terminal in your Fedora workstation to complete the following:

1. Change to your home directory and create a directory called *Practical1*.
2. Create an empty file in your home directory called *Salad*.
3. Add the following lines to the file *Salad*: *Lettuce*, *Tomato*, and *Carrots*.
4. View the permissions of the file and take a screenshot of the permissions.
5. Change the permissions to the file *Salad*. Give everyone full control.
6. Create the following directories under *Practical1*:  
    *Food/recipes/dinner* (one is a subdirectory of the other).
7. Move the file *Salad* to the dinner directory.
8. Rename *Salad* to *Menu* in the dinner directory.
9. Append the word *Salad1* into the *Menu* file in the dinner directory.
10. Display the content of the file *Menu* on screen.

End of the lab!
